

Rewind Backups for Microsoft Office 365

Your Data = Your Responsibility

Microsoft 365 enables you to work anywhere, anytime without needing to host your own email, files, and content management system. Even though Microsoft hosts the infrastructure, the responsibility to maintain a backup of your business-critical data is yours.

[Microsoft recommends](#) using third-party solutions to protect data against common issues like file corruption and everyday human error.

Service Availability

6. Service Availability:

a. The Services, Third-Party Apps and Services, or material or products offered through the Services may be unavailable from time to time, may be offered on a limited basis, or may vary depending on your region or device. If you change the location associated with your Microsoft account, you may need to re-acquire the material or applications that were available to you and paid for in your previous region. You agree not to access or use material or Services which are illegal or not licensed for use in the country from which you access or use such material or Services, or to conceal or misrepresent your location or identity in order to access or use such material or Services.

b. We strive to keep the Services up and running; however, all online services suffer occasional disruptions and outages, and Microsoft is not liable for any disruption or loss you may suffer as a result. In the event of an outage, you may not be able to retrieve Your Content or Data that you've stored. **We recommend that you regularly backup Your Content and Data that you store on the Services or store using Third-Party Apps and Services.**

Microsoft recommends in their Services Agreement that users regularly back up their data. (Accessed November 15, 2021)

EXPERT SUPPORT, 7 DAYS A WEEK

Having to restore data can be stressful. Rewind has experts who can help every step of the way.

The Status Quo isn't a Security Strategy

It's not a matter of if mistakes or malicious actions will occur, it's a matter of when:

- [90%](#) of all data breaches are due to human error.
- A business falls victim to a ransomware attack every [11 seconds](#).
- The average cost of a data breach is USD [\\$1.23 million](#) and [\\$120,000](#) for enterprises and SMBs, respectively.

Having a disaster recovery plan will save you money, time, and energy. The ability to quickly restore critical data is crucial to recovering from a data breach.

Simple Pricing for your Organization

Because backups shouldn't break the bank.

Rewind Backups for Microsoft 365 is USD \$4.16 per user per month. All plans are billed annually.
